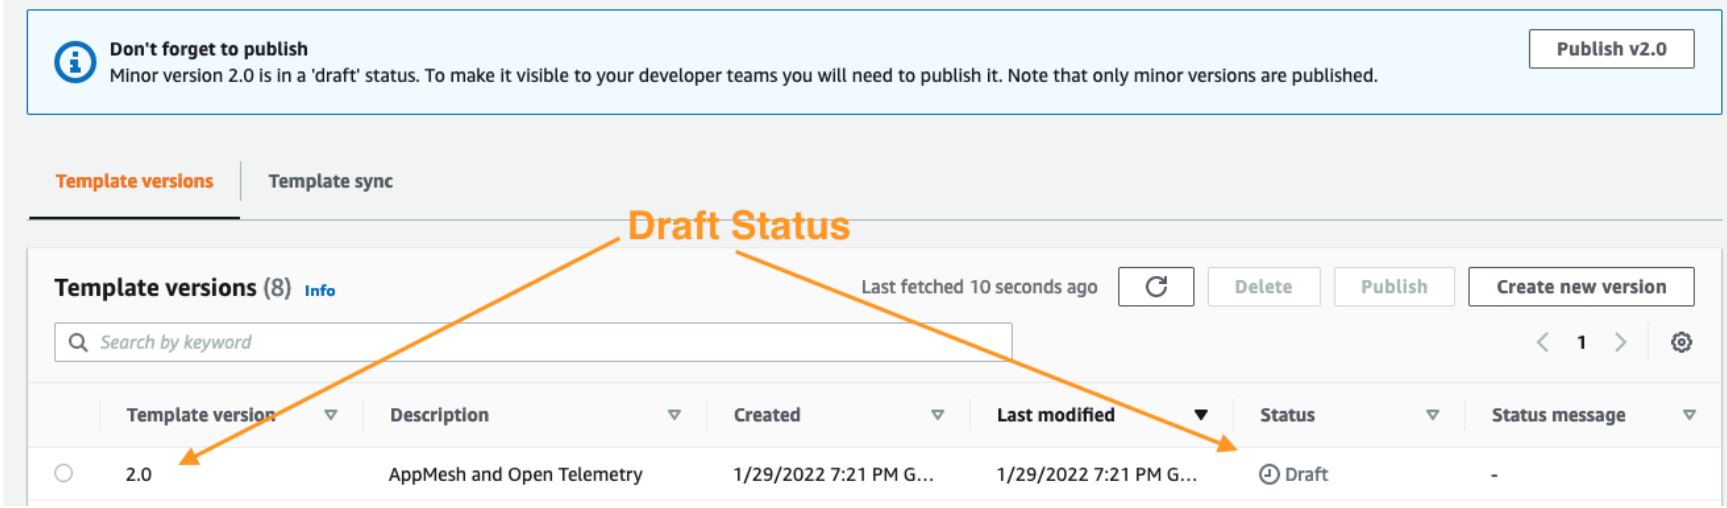
Publish service template

We have created a service template sync config in module 1 to publish automatically minor and major versions. By now, Proton should have detected the new template bundle version and created it in Draft mode.

If you go to the AWS Proton Web UI you should see an Service Template called "lb-fargate-service" with a new version 2.0. This version is now in Draft mode.



In order to publish it you need to run the following command:

```
MAJOR_VERSION=$(aws proton list-service-template-versions --template-name "lb-fargate-service"
--region=${AWS_REGION} | \
  jq -r ' .templateVersions[] | select( .status=="DRAFT") | .majorVersion' | tail -1 \
); \
aws proton update-service-template-version \
  --region ${AWS_REGION} \
  --template-name "lb-fargate-service" \
  --major-version "$MAJOR_VERSION" \
  --minor-version "0" \
  --status "PUBLISHED"
```
