

Add Envoy and Opentelemetry to the services

Adding Envoy and Opentelemetry sidecars to the ECS Task Definition

Let's add the infrastructure definition that we will need for Envoy and Opentelemetry. Copy and paste the following command to update the `cloudformation.yaml` file:

```
1 git checkout -b module-2-service
2 cp -R lb-fargate-service/v1 lb-fargate-service/v2
3 wget -O lb-fargate-service/v2/instance_infrastructure/cloudformation.yaml "https://static.us-east-1.
```

Expand the below file if you want to check the changes to the `cloudformation.yaml` file. This file just highlights the changes we are introducing.

► `lb-fargate-service/v2/instance_infrastructure/cloudformation.yaml`
